EnSafe Acquires Canada-based Firm, Porewater Solutions

Posted on June 1, 2026

EnSafe is pleased to announce the acquisition of Canada-based Porewater Solutions (Porewater). Porewater brings deep technical expertise in PFAS modeling and visualization, NAPL characterization, site remediation, environmental forensics, litigation support, and technology development. Porewater's specialized tools, including Visual PFAS™, enhance the interpretation and communication of complex environmental datasets for remediation planning, forensic evaluations, and regulatory decision-making. The addition of Porewater

enhances EnSafe's ability to deliver cutting-edge, data-driven solutions to complex environmental challenges, further strengthening EnSafe's already robust PFAS capabilities.

Joining us is Porewater founder, Dr. Grant Carey, who has nearly 35 years of experience in the characterization, remediation, and modeling of contaminated sites. Grant is currently involved with multiple SERDP and ESTCP projects for the U.S. Department of Defense focused on PFAS fate and transport modeling, in-situ remediation, visualization methods, and technology transfer.

"We're very excited about merging Porewater Solutions into the EnSafe Team! We're also looking forward to expanding the use of our industry-leading PFAS visualization and modeling tools, including Visual PFAS™, to enhance site characterization, remediation planning, and forensic analyses for EnSafe's government and commercial clients," said Carey.

Don Bradford, PG, CHMM, CPEA, President & CEO of EnSafe, emphasized the strategic advantages of the merger.

"This acquisition reflects EnSafe's commitment to combining environmental expertise with advanced data and visualization technologies. Porewater's capabilities complement our EIS services and add unique modeling, visualization, and technology-development capabilities that strengthen our role as a trusted advisor in PFAS remediation and defense-related environmental programs. The result is a differentiated platform that improves client insight, decision-making, and program
